

## **Air Quality Expected to Decline due to Stagnant Weather**

**VANCOUVER, Wash.** – A Stage One Burn Ban is being called for Lewis & Cowlitz Counties effective 5 p.m. today and continuing at least through Monday. Due to a high pressure system building over the Pacific Northwest the National Weather Service (NWS) has issued an Air Stagnation Advisory affecting Cowlitz and Lewis counties in SWCAA jurisdiction and adjacent areas to the north.

Under a Stage 1 Ban, all outdoor burning is prohibited, even in areas where outdoor burning is not permanently banned, and no burning is allowed in fireplaces or uncertified wood stoves. Those with no other source of adequate heat for their homes are exempt.

Stagnant weather conditions coupled with cold overnight temperatures can cause air pollution levels to climb enough to raise concerns about impaired air quality and its impacts on health. These conditions may briefly improve each afternoon but overnight inversions and stagnation are expected to inhibit overall clearing. A change in weather will be needed to significantly improve ventilation and mixing, but that's not forecast to occur before early Tuesday morning.

These curtailments occur in two progressive stages as needed:

**Stage 1:** Outdoor burning and the use of all fireplaces and uncertified wood stoves and inserts is banned when pollution is forecasted to reach unhealthy levels. Uncertified units are typically older than 1990 and lack a certification label on the back of the unit.

**Stage 2:** All wood burning is prohibited, including certified home heating units, when the Stage 1 curtailment has not reversed the increasing pollution trend and weather conditions still indicate a high risk for exceeding air quality health standards.

The objective of this Stage 1 curtailment is to prevent exceeding the federal health-based  
(more)

standard for fine particle pollution. Although fine particle pollution levels may decrease some during the day, on cold nights with little or no wind, wood smoke pollution can accumulate to levels that are considered unhealthy. Fine particles released by smoke from outdoor burning, wood stoves, and fireplaces are of concern because they can reach deep into the lungs. Episodes of high fine particle pollution can trigger asthma attacks, cause difficulty breathing and make lung and heart problems worse. The Southwest Clean Air Agency encourages residents to postpone their outdoor burning projects until favorable weather patterns return. We are not asking anyone to go without heat, but to use an alternative source of heat if possible until our air quality returns to healthy levels.

To sign up to receive e-mail notifications of these wood stove curtailment burn bans, visit [www.swcleanair.org](http://www.swcleanair.org).

Founded in 1968, the mission of the Southwest Clean Air Agency is to preserve and enhance the air quality in southwest Washington. Serving the counties of Clark, Cowlitz, Lewis, Skamania and Wahkiakum, SWCAA is responsible for protecting the public's health through the enforcement of federal, state and local air quality standards and regulations.
